

# Mouse anti-CD10, clone 56C6 (monoclonal)

Clone no. 56C6 MONXtra

Product name Mouse anti-CD10, clone 56C6 (monoclonal)

**Host** Mouse

Applications IHC-P (1:100)

Species reactivity human

Conjugate -

Immunogen Prokaryotic recombinant fusion protein corresponding to the external

domain of the human CD10 glycoprotein.

lsotype lgG1

**Clonality** Monoclonal

Clone number 56C6

Size 1 ml

**Concentration** n/a

Format -

Storage buffer Tissue culture supernatant with sodium azide

Storage until expiry date 2-8°C

## FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES

Product datasheet MONX10354

Mouse anti-CD10, clone 56C6 (monoclonal)

Clone no. 56C6 MONXtra

#### Additional info

CD10 antigen, also called neprilysin, is a 100 kD cell surface metalloendopeptidase which inactivates a variety of biologically active peptides. It was initially identified as the common acute lymphoblastic leukemia antigen (CALLA) and was thought to be tumor-specific. Subsequent studies, however, have shown that CD10 antigen is expressed on the surface of a wide variety of normal and neoplastic cells. In other lymphoid malignancies, CD10 antigen is reported to be expressed on cells of lymphoblastic, Burkitt's and follicular lymphomas. CD10 antigen has been identified on the surface of normal early lymphoid progenitor cells, immature B cells within adult bone marrow and germinal center B cells within lymphoid tissue. It is also expressed in various non-lymphoid cells and tissues, such as breast myoepithelial cells, bile canaliculi, fibroblasts, with especially high expression on the brush border of kidney and gut epithelial cells. (G. McIntosh et al. American Journal of Pathology. 154(1): 77-82 (1999)).
