

Mouse anti-Alpha-Synuclein, clone KM51 (monoclonal)

Clone no. KM51 MONXtra

Product name Mouse anti-Alpha-Synuclein, clone KM51 (monoclonal)

Host Mouse

Applications IHC-P (1:20-1:40)

Species reactivity human

Conjugate -

Immunogen Prokaryotic recombinant protein corresponding to the majority of the full

length alpha-synuclein molecule

lsotype lgG1, kappa

Clonality Monoclonal

Clone number KM51

Size 1 ml

Concentration n/a

Format -

Storage buffer Tissue culture supernatant with 15mM sodium azide

Storage until expiry date 2-8°C

FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES

Mouse anti-Alpha-Synuclein, clone KM51 (monoclonal)

Clone no. KM51 MONXtra

Additional info

Alpha-synuclein is a protein of 140 amino acids and a member of the synuclein family. It shares 61% sequence homology with beta-synuclein and is highly conserved between vertebrate species. It does not possess a signal sequence suggesting that it is an intracellular protein. All synucleins have an unusual organization based around the eleven residue repeating motif and an alpha-helical secondary structure resembling those found in the lipid-binding domain of exchangeable apolipoproteins, including Apo E. This homology suggests a direct interaction of alpha-synuclein with membranes consistent with its affinity for synaptosomes. Clone KM51 is specific for alpha-synuclein and is unreactive with beta-synuclein. Pretreatment of tissue sections with 98-100% formic acid is also recommended.
